CONSUMER PRICE DYNAMICS: FACTS, ASSESSMENTS AND COMMENTS (OCTOBER 2021)

Annual inflation in October reached 8.13%. The monthly increase in consumer prices (seasonally adjusted) was the biggest since April 2015. Higher food prices were the main contributor. The acceleration of their growth reflected the influence of a modest harvest of field vegetables and higher costs. The monthly and annual indicators of sustainable price movements also increased to their multi-year highs indicating the risks of persistently high inflation expectations. Annual inflation is forecast to reach 7.4–7.9% by the end of 2021. Given the current monetary policy stance, annual inflation will stand at 4.0–4.5% as of 2022 year-end.

Current trends

In October 2021, annual inflation rose by 0.73 pp, to 8.13%. Accelerated growth in fruit and vegetable prices accounted for nearly a half of that rise with animal food products (meat and dairy products) comprising a quarter thereof. This was partly due to factors on supply side, lagging behind demand. Annual food inflation generally increased by 1.68 pp, to 10.89%.

The annual growth rates of food and non-food prices also increased but to a much lesser extent – by 0.11 pp to 8.17% and by 0.14 pp to 4.36 %, respectively.

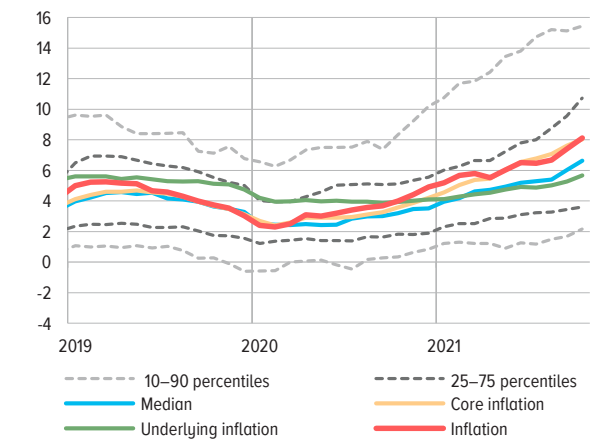

The monthly growth of consumer prices (*seasonally adjusted*, SA) increased by 0.2 pp, to 1.1%, – its maximum value since April 2015, in particular, food products were up 0.3 pp and reached 1.9% (SA), which is the highest since March 2015. The growth rates of prices (SA) for many basic food products increased, including due to a higher cost pressure. The monthly growth rate of prices for fruit and vegetables stayed at multi-year highs. The monthly growth in prices for non-food goods increased in October by 0.1 pp, to 0.7% (SA), which is equal to its average recorded in Q2 and Q3. A rise in motor fuel prices following their reduction in September turned out the main

contributor. Bottlenecks in global supply chains continued to impact non-food prices. The growth rate of prices for services also rose by 0.1 pp, to 0.5% (SA). The price movements in this consumer market segment heavily depend on the epidemiological situation in the Russian regions and the world and remain volatile. The three-month average price growth rates for key commodity groups were higher than in the preceding three months. A stronger ruble had a modest constraining effect on the price growth rates.

Overall inflationary pressure remained high. Faster food inflation, households' inflation expectations are rather sensitive to, can affect the latter.

Stable inflation indicators

Indicators of sustainable price movements (core inflation, median annual growth) continued to rise in October. *Estimated underlying inflation* rose by 0.38 pp, to 5.66%.

The monthly indicators of sustainable price dynamics (SA) also increased to substantially reflect higher prices for animal food products, whose growth rates tend to be slow in response.

The price growth rate of non-food goods excluding petroleum products remained virtually unchanged at 0.7% (SA) compared to September. In annualised terms, it significantly exceeds 4%. The prices were still affected by supply-side factors including those associated with disruptions in the delivery of imported intermediate products. Nonetheless, the price growth in October was slightly lower than in Q2 and Q3. In October, as in September, prices for construction materials (SA) went down following the reduction in global prices for timber and black metals and as a result of customs and tariffs regulation measures taken by the Russian government. The growth in prices for furniture, household appliances and electronics slowed down. On average, over the last three months, prices for home improvement goods grew slower than in the previous three months.

Price growth (SA) for market services with relatively steady price trends (personal and medical services) equalled 0.5-0.7 pp (SA), which matched 2021 Q2-Q3 averages. This is substantially higher than 4% in annual terms. Overall, indicators of stable price movements pointed to higher inflationary pressure.

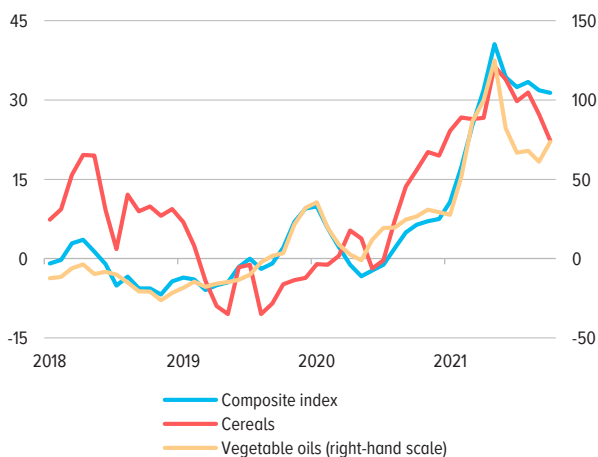

Impact of increased food production costs

In October, pressure of costs growth (including the one which took place earlier) on food market prices continued to build up. Such pressure was associated with the growth of prices in global commodity markets, which reflected in higher costs for both agricultural and industrial intermediate products and raw materials. An unfavourable epizootic situation additionally pushed costs in the livestock sector.

Growth in prices for food products (excluding fruit and vegetables) accelerated by 0.4 pp, to 1.2% (SA) – the record high since April 2015. Faster growth in food prices can be instrumental in the formation of households' inflation expectations.

Impact of volatile and regulated components

The growth in **fruit and vegetable** prices slightly slowed down (by 0.3 pp), but stayed close to its multi-year high, totalling 7.3% (SA). The market situation is affected by a decline in the supply of field vegetables, potatoes first of all, resulting from poor weather conditions during the planting, growing and harvesting. The annual growth in prices for fruit and vegetables increased by 10.43 pp, to 25.6%.

Faster rate of monthly (SA) and annual growth in prices for non-food goods was mainly associated with the movements in **motor fuel** prices. In October, they went up by 0.5% following the 0.4% reduction in September. The annual price growth amounted to 7.47%, remaining below the inflation rate.

As before, the **transport, hotel and tourism** markets depended on the pandemic situation in Russia and in the world, which determined the retention of price volatility in the services market overall. Prices for transport and health services went up (SA) following their decline in September. Growth in prices for hotel accommodation accelerated. In contrast, foreign travel costs went down (SA) after some rise. The main contribution to the increase in the annual growth rate of prices for services was made by the acceleration of rise in airfares.

Inflation in Russian regions

In October 2021, annual inflation accelerated in the absolute majority of regions (79 regions accounting for approximately 98% in the CPI) as compared to the previous month. Inflation mainly rose on the back of faster growth rate of food prices. Concurrently, most Russian regions saw accelerated increase of prices for non-food goods and services.

Inflation sped up across all federal districts. The North Caucasian Federal District recorded the most notable acceleration of annual inflation, largely due to higher growth rates of food prices. This was mainly driven by a surge in the growth rate of prices for animal products (meat, dairy products, eggs) and vegetables (cucumbers and tomatoes).

In October, the lowest inflation was observed in the Far Eastern Federal District. This is explained by a moderate increase in prices for all core consumer basket components. The Far Eastern regions witnessed the acceleration in price growth rates of meat products, motor fuel, and railway fares. At the same time, growth rates of prices for sunflower oil and sugar, passenger cars and foreign travel (Turkey) slowed down.

Compared to the previous month, the distribution of regional inflation changed slightly. Most regions observed a faster acceleration of inflation than in the previous month, which was mainly attributed to higher food inflation. The Chukotka Autonomous Area turned out to be the region with the lowest rate of inflation in October.

The regional heterogeneity of inflation was higher than in September (inflation rates across regions varied from 3.1% to 13.3%). This is also confirmed by variance values rising to their two-year highs.
