

## RUSSIAN ECONOMIC OUTLOOK AND MONETARY POLICY

October 2018

# Inflation in September 2018

Annual inflation is on track to return to 4%, consistent with the Bank of Russia forecast. This September's upward movement of inflation was largely driven by annual food price growth accelerating to 2.5%.

# Most annual inflation indicators reflecting the most sustainable price movements are growing

Change:

- Inflation expectations become better (more than 1 standard deviation)

- Inflation expectations become better (less than 1 standard deviation)

- Inflation expectations unchanged (±0,2 standard deviations)

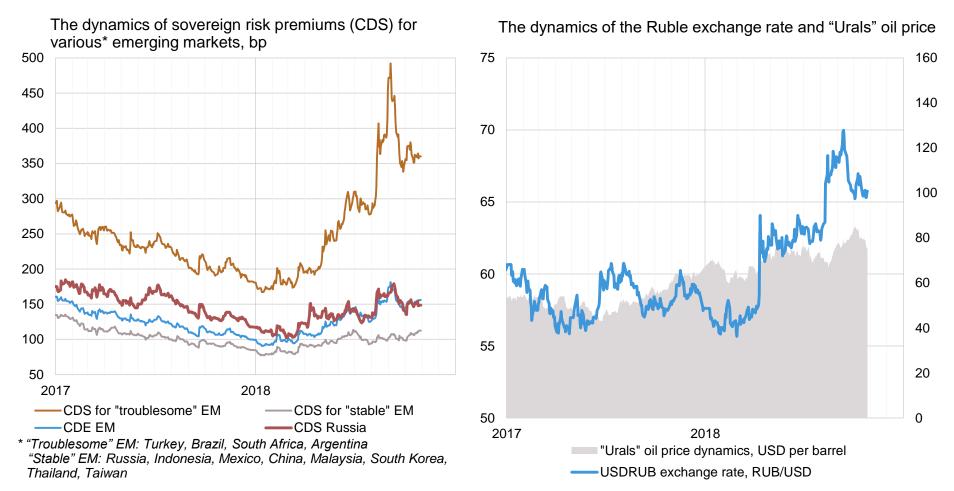

- Inflation expectations become worse (less than 1 standard deviation)

- Inflation expectations become worse (more than 1 standard deviation)

\*Balanced index is the difference between the shares of those who expect prices to rise and to fall

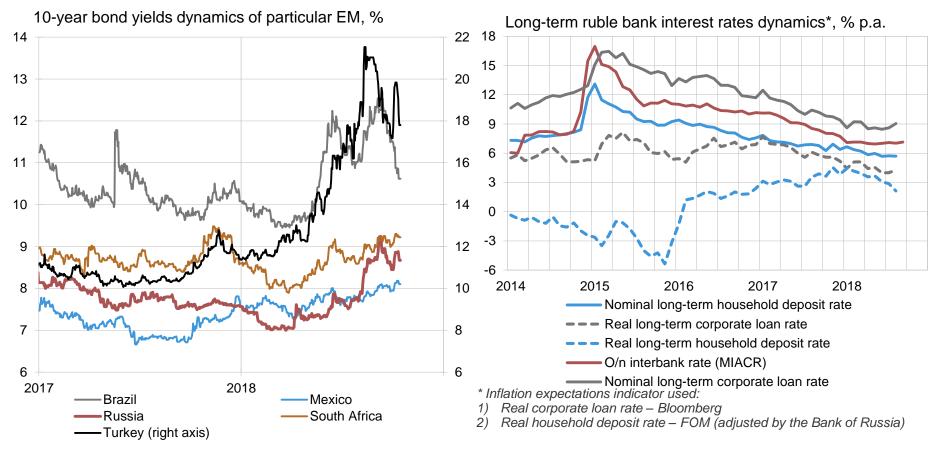

# The domestic financial market saw a stabilisation in the second half of September and in October, with exchange rate volatility declining

# A certain tightening in monetary conditions is ongoing

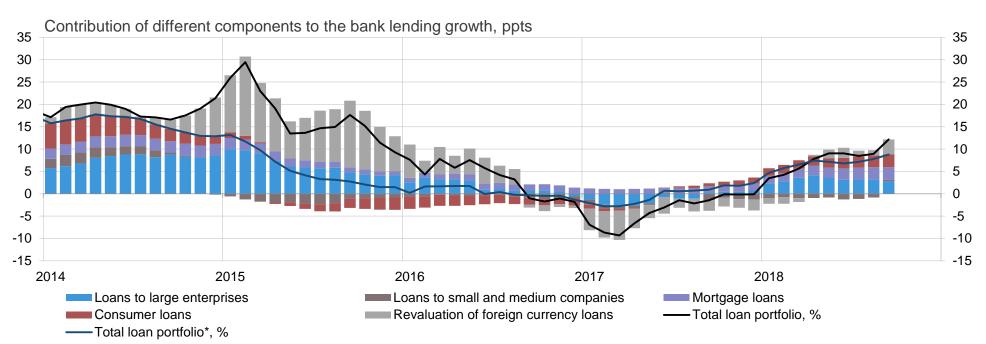

In the time since the previous Board meeting, OFZ yields have moved lower but are still markedly above this year's Q1 readings. Under these conditions, a further rise in interest rates is progressing in the deposit and credit market

Sources: Reuters, Moscow Stock Exchange, Bank of Russia

# Retail and corporate lending continue to grow

\* Excluding foreign currency revaluation

# Positive real interest rates will support the attractiveness of savings and balanced growth in consumption

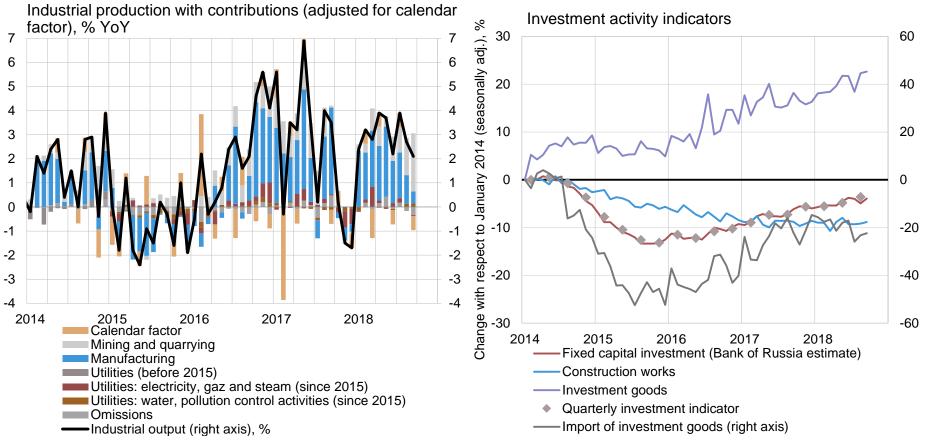

Consumer demand expanded at moderate rates, mainly on the back of non-food sales

# The Russian economy is growing at rates close to its potential

This September saw a rise in industrial output; sectoral output trends remained mixed, however. Bank of Russia estimates show that investment growth was continued in the third quarter

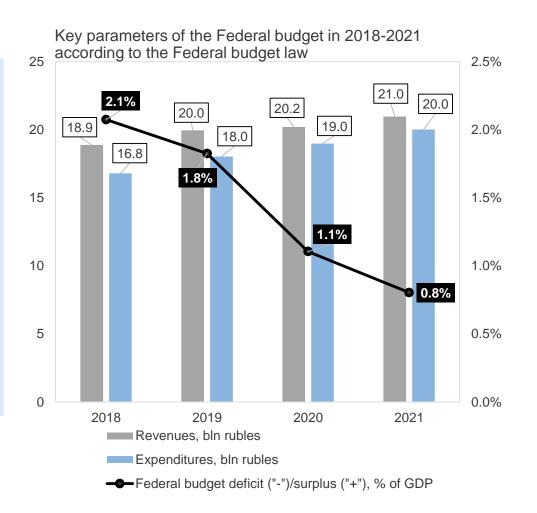

Sources: Rosstat, Federal Customs Service, Bank of Russia

# The Bank of Russia's forecast takes into account the set of fiscal and structural measures for 2024 as proposed by the Government

The set of fiscal and structural measures to be taken by 2024:

- The increase of the value-added tax rate from 18% to 20% in January 2019
- The increase of the retirement age from 2019
- Additional expenditures in the amount of 8 trln rubles on infrastructure investment and human capital
- Oil and gas tax maneuver

In September the Bank of Russia decided to extend the suspension of FX purchases in the domestic market under the fiscal rule until the end of 2018

The decision to resume regular foreign currency purchases in the domestic market under the fiscal rule will be based on the assessment of the actual situation in the financial markets

The decision on the foreign currency purchases in the domestic market that were postponed in 2018 will be made **<u>separately</u>** after regular purchases are resumed

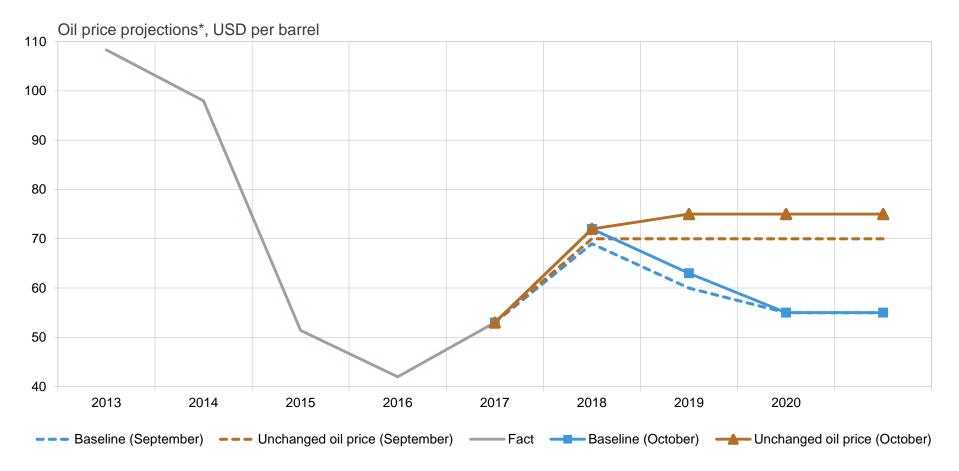

Postponed purchases will be carried out in the course of 2019 and later years

- Lowers overall volatility in the financial markets
- Curtails exchange rate volatility and its influence on inflation and inflation expectations over the next few quarters
- ✓ Visibility on monetary authorities' actions

# Oil price projection for 2018-2021 shifted moderately higher

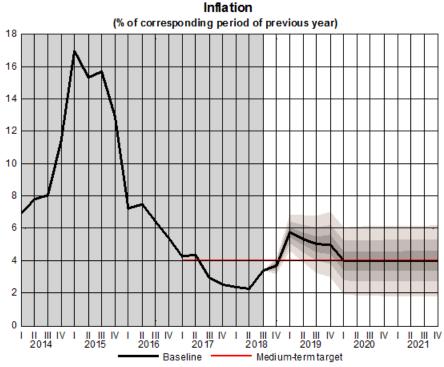

The baseline trajectory now stands at \$63/bbl - \$55/bbl - \$55/bbl (from 60-50-50 in September)

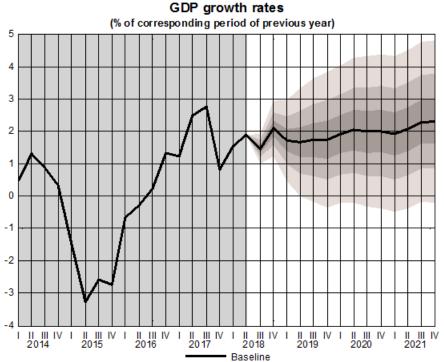

# Bank of Russia's baseline scenario in October 2018

Annual inflation will slow down to 4% in the first half of 2020 when the effects of the ruble's weakening and the VAT rise peter out.

Note: shaded areas on the forecast horizon show the probability of different inflation values. Colour gradation reflects probability

Higher potential growth rates in 2020-2021 if the planned fiscal and structural measures are successfully implemented

Note: shaded areas on the forecast horizon show the probability of different inflation values. Colour gradation reflects probability

Published in Monetary Policy Guidelines for 2019-2021

# Monetary policy decision as of 26 October 2018

### Инфляция и инфляционные ожидания

- Prices are adjusting to the ruble exchange rate that has weakened since the beginning of the year
- · Uncertainty persists over the subsequent movements of inflation expectations
- One-off factors are expected to trigger a temporary acceleration in annual inflation, which will peak in the first six months of 2019
- Annual inflation will slow down to 4% in the first half of 2020 when the effects of the ruble's weakening and the VAT rise peter out

### Monetary conditions: their certain tightening is ongoing

#### **Economic activity**

- The Bank of Russia's view of the Russian economy's mid-term growth prospects has also remained mainly unchanged
- In 2019, the forthcoming VAT increase might have a slight constraining effect on business activity (mostly in the beginning of the year)
- The following years might see higher growth rates as the planned structural measures are implemented

Pro-inflationary risks remain elevated, especially over a short-term horizon

- The main risks: (1) Continuing uncertainty over future external conditions and their impact on financial asset prices
- Moderate risks estimates are mostly unchanged: (2) oil price volatility, (3) wage movements,
   (4) possible changes in consumer behavior

### **Decision**

The Bank of Russia keeps the key rate at 7,50% per annum

### **Signal**

"...The Bank of Russia will consider the necessity of further increases in the key rate, taking into account inflation and economic dynamics against the forecast, as well as risks posed by external conditions and the reaction of financial markets..."

# APPENDIX

# Amid structural liquidity surplus the Bank of Russia mostly conducts deposit auctions, with Bank of Russia's bonds (OBR) being issued since August 2017
