RUSSIA’S ECONOMIC OUTLOOK AND MONETARY POLICY

February 2019
Consumer prices

In January 2019, annual inflation held at the lower bound of the Bank of Russia expectations (5.0% YoY). Faster growth of food prices to 5.5% (vs 4.7% in December 2018) played a significant role in the inflation rise. The contribution of the VAT increase to annual consumer price growth in January was moderate. Prices are completing their adjustment to the ruble's weakening of the second half of 2018.

**Change:**

- Inflation expectations become better (more than 1 standard deviation)
- Inflation expectations become better (less than 1 standard deviation)
- Inflation expectations unchanged (±0.2 standard deviations)
- Inflation expectations become worse (less than 1 standard deviation)
- Inflation expectations become worse (more than 1 standard deviation)

*Balanced index is the difference between the shares of those who expect prices to rise and to fall*

Sources: FOM, Rosstat, Bloomberg, Interfax, Thompson Reuters, Bank of Russia
Inflation expectations – households

In January, household inflation expectations rose only slightly (by only +0.2 ppts compared to December)

Source: LLC “inFOM”
In January, price expectations of businesses increased on the back of the earlier weakening of the ruble and the VAT increase.
Economic activity – GDP growth and industrial production

Rosstat’s flash estimate shows that 2018 GDP growth totalled 2.3%, which exceeds the Bank of Russia’s forecast of 1.5-2%. However, recent months have seen slower growth in economic activity.

Sources: Rosstat, Bank of Russia
Retail sales and savings rate

Consumer demand growth is moderating with retail sales at +2.3% YoY in December, still mostly driven by non-food sales. Savings rate grew to 3% in December, which is still well below 2015-2017 averages.
Deposit and credit market – lending

Lending growth is still ongoing, both for retail and corporate lending. Though the growth rate has somewhat slowed down amid rising interest rates.

Source: Bank of Russia

* Excluding foreign currency revaluation
Deposit and credit market – interest rates

Interest rates in the deposit and credit market have risen slightly. Sustained positive real interest rates are set to support the attractiveness of bank deposits and bonds and balanced growth in consumption.

* Monetary policy department calculations

Money market conditions

In the light of the persistent structural surplus MIACR remains moderately below the key rate. In Q4 2018 the spread averaged at -20 bps. In Q1 2019 the average spread so far is -9 bps, which is the least deviation from the key rate since Q2 2017.
Monetary policy and inflation around the globe (1)

Analysts are expecting policy rate cuts in particular EM (Mexico, Turkey). Inflationary pressure in DM has fallen due to lower oil prices

Published in Monetary policy report №4 (December 2018)
Monetary policy decision, 08 February 2019

**Inflation and inflation expectations**
- In January 2019, annual inflation held at the lower bound of the Bank of Russia expectations.
- The contribution of the VAT increase to annual consumer price growth in January was moderate. The effect of the VAT increase on inflation can be fully captured no sooner than this April.
- Prices are completing their adjustment to the ruble’s weakening of the second half of 2018.
- In January, price expectations of businesses increased on the back of the earlier weakening of the ruble and the VAT increase. Household inflation expectations rose only slightly.
- The Bank of Russia forecasts annual inflation to range between 5.0 and 5.5% by the end of 2019 and return to 4% in the first half of 2020 when the effects of the ruble’s weakening and the VAT rise peter out.

**Monetary conditions** have seen no significant changes since the last Board meeting.

**Economic activity**
- Rosstat’s flash estimate shows that 2018 GDP growth totalled 2.3%, which exceeds the Bank of Russia’s forecast of 1.5-2%.
- However, recent months have seen slower growth in economic activity.
- The Bank of Russia maintains its 2019 GDP growth forecast in the range of 1.2-1.7%.
- The newly received budgetary funds will be used to raise government spending including investment as early as 2019. Subsequent years might see higher economic growth rates as the planned structural measures are implemented.

The balance of risks remains skewed towards pro-inflationary risks, especially over a short-term horizon.

- **The main risks**: (1) the effects of the VAT increase, (2) price movement in individual food products, (3) continuing uncertainty over future external conditions and their impact on financial asset prices, (4) high risks of supply exceeding demand in the oil market in 2019.
- **Moderate risks** – estimates are mostly unchanged: (5) wage movements, (6) possible changes in consumer behavior, (7) budget expenditures.

**Decision**

The Bank of Russia **keeps the key rate** at 7.75% p.a.

**Signal**

“…In its key rate decision-making, the Bank of Russia will determine if the increases of the key rate in September and December 2018 were sufficient to bring annual inflation back to the target in 2020, taking into account inflation and economic performance against the forecast, as well as the risks associated with external conditions and financial markets’ response to them…”
Bank of Russia’s FX operations related to the fiscal rule

On 14 December 2018 the Bank of Russia decided to resume regular foreign currency purchases in the domestic market as part of fiscal rule implementation from 15 January 2019.

The decision was made given the stabilisation in the domestic financial market.

On 25 January 2019 the Bank of Russia decided to commence from 1 February 2019 the foreign currency purchases in the domestic market that were postponed in 2018 as part of fiscal rule implementation.

The postponed purchases will be carried out gradually in the 36 months since the launch of these operations.

These operations will increase the daily amount of foreign currency purchases in the domestic market under the fiscal rule by 2.8 billion rubles.

The Bank of Russia reserves the right to suspend foreign currency purchases in the domestic market under the fiscal rule in the event of financial stability threats.
